CBR Quality For All Production Steps!

Recommended steps for smaller remanufacturing operation

Electronic Testing

ShopTester 200

Always the first and the last step in the remanufacturing process is the electronic testing and print testing on ShopTester or SmartPrinter.

Atomizer spray cleaning

ShopClean 55

Universal nozzle plate cleaning unit (atomizer) for all cartridge types. Release of dried ink and pigments.

Rehydration

VacuumBoxx Impregnation Unit

VacuumBoxx connected to any vacuum pump (also our filling units) for an effective rehydration in all capillaries in sponge core inkjet cartridges. Hold approximately 20pc cartridge at one time. **Can also be used to fill Tank cartridges!**

Flushing- Balancing

Service Unit55 NEW

Songe cleaning system for all kind of inkjet cartridges. Flushing device (timer controlled) for color and black cartridges. Including balancing function!

Otional modell for this function:

ServiceUunit 100

The same functionality like above unit just in a smaller scale!

Emptying

ShopDrain 100

Universal draining centrifuge with adapter for all common cartridge types. The adapter holds up to 12 cartridges straight in direction of the nozzles to empty all ink or cleaning fluid.

Vacuum Filling

ShopFill 55 / ProFill 155

This vacuum filling technology avoids cartridges from stop printing after some pages and allows a higher availability and capacity of the cartridge during its whole life-time.

The smallest and most reliable vacuum filling units now also available with timer function for serial production!
